### About the Fund

The Pendal Imputation Fund (**Fund**) is an actively managed portfolio of Australian shares. The Fund invests in a portfolio which we believe will provide a higher yield than the market average. It is intended that the portfolio will be well diversified across sectors and not biased structurally to invest only in traditional 'yield stocks'.

### Investment Return Objective

The Fund aims to provide a return (before fees, costs and taxes) that exceeds the S&P/ASX 300 (TR) Index over the medium to long term. The suggested timeframe for holding the investment is five years or more.

### Description of Fund

This Fund is designed for investors who want the potential for long term capital growth and tax effective income, diversification across a broad range of Australian companies and industries and are prepared to accept higher variability of returns. The Fund will primarily invest in Australian shares, including Australian listed property securities and convertible preference shares, that offer above average income returns. The Fund may also hold cash and may use derivatives.

Pendal's investment process for Australian shares is based on our core investment style and aims to add value through active stock selection and fundamental company research. Pendal's core investment style is to select stocks based on our assessment of their long term worth and ability to outperform the market, without being restricted by a growth or value bias. Our fundamental company research focuses on valuation, franchise, management quality and risk factors (both financial and non-financial risk).

Derivatives may be used to reduce risk and can act as a hedge against adverse movements in a particular market and/or in the underlying assets. Derivatives can also be used to gain exposure to assets and markets.

### Investment Team

Pendal's eighteen member Equity team is one of the largest in the Australian funds management industry. The portfolio managers for the Fund are Andrew Waddington and Jim Taylor, who have a combined 65 years industry experience.

<sup>1</sup> Franking credit returns reflect the value, expressed as a percentage of the Fund's net asset value, of franking credits earned, directly or indirectly, by the Fund on the dividends it has accrued. Returns grossed up for franking are calculated by adding the franking credit returns to the total returns after-fees. The Fund's actual entitlement to franking credits is only known at 30 June each year and therefore amounts during the year are estimates only, subject to revision. Franking credit returns, and returns grossed up for franking, for the Benchmark are calculated on an equivalent basis.

<sup>2</sup> After-tax returns should only be viewed as a guide to the after-tax position of an investor in the Fund. The after-tax returns of the Fund will depend on an investor's individual tax situation and may differ from those shown. There have been a number of assumptions made in the calculation of after-tax returns, which include: investors are Australian resident taxpayers; investors hold their units on capital account; returns assume reinvestment of after-tax distributions on the distribution period end date; returns are calculated using applicable income tax rates at the time of each distribution; capital gains concessions (CGT discount) are always available to the investor; tax credits distributed by the Fund can be fully utilised by the investor; investors will be able to immediately offset any loss made on their units against capital gains from other sources. FY Stands for Financial Year, which runs from July 1 to June 30.

<sup>3</sup> The pre-liquidation returns refer to the after-tax returns assuming a continuing investment in the Fund. It is calculated using the actual discounts that applied to the fund on any realised capital gains and assuming the distributions are reinvested on an after-tax basis. Post-liquidation returns refer to the after-tax returns assuming a full redemption of an investor's units. It is calculated by including, in addition to the reinvestment of after-tax distributions, the unrealised gains, based on the assumption that the asset has been held for more than 12 months and that the CGT discount rate is applied to the unrealised gains and, in the case of unrealised losses, that those losses would be immediately available to the investor.

Performance figures are calculated in accordance with the Financial Services Council (FSC) standards. Where performance returns are quoted "Post fees" then this assumes reinvestment of distributions and is calculated using exit prices which take into account management costs but not tax you may pay as an investor, except where returns are shown as "Crossed up for franking" or "Post-tax". Post-tax returns are explained in the footnotes to the relevant performance tables. Where performance returns are quoted "Pre fees and tax", they exclude the effects of management costs and any taxes. Past performance is not a reliable indicator of future performance.

If market movements, cash flows or changes in the nature of an investment (e.g. a change in credit rating) cause the Fund to exceed any of the investment ranges or limits specified, this will be rectified by PFSL as soon as reasonably practicable after becoming aware of it. If PFSL does so, it will have no other obligations in relation to these circumstances. The procedures, investment ranges, benchmarks and limits specified are accurate as at the date of this factsheet and PFSL reserves the right to vary these from time to time.
