Carbon performance

The estimated weighted average carbon intensity (WACI) of the portfolio, using greenhouse gas emissions (scope 1 and 2¹) data supplied by ISS and weighted by the size of our holding in each company, is shown in the table below. In other words, this provides an indication of a portfolio's exposure to carbon intensive companies. We also compare this to the weighted average emissions for the companies in the aggregated ASX 200 index.

We caution that there are limitations of using carbon metrics as an indicator of a portfolio's overall exposure to climate-related risks. For example, not all companies report their emissions data and hence some of the below analysis includes estimates. Also, it does not include scope 3 emissions. Further, portfolio carbon analysis does not capture exposure to physical climate-related risks, or the unique transition risks some companies within the portfolio face. Nevertheless, the WACI metric is recommended by the Task Force on Climate-related Financial Disclosures (TCFD)², noting it supports greater comparability of investor reporting.
