About the Fund

The Pendal Enhanced Credit Fund (**Fund**) is an actively managed portfolio of primarily Australian corporate bonds.

Investment Return Objective

The Fund aims to provide a return (before fees, costs and taxes) that exceeds the Bloomberg AusBond Non Govt 0+ Yr Index over the medium term.

The suggested investment timeframe is three years or more.

Investment Strategy

The Fund is actively managed and aims to take advantage of investment opportunities within the Australian non-Government fixed interest market. The Fund invests predominantly in AUD non-Government fixed interest securities, including securities of investment grade issued by leading corporations listed on the Australian Stock Exchange. The Fund may also invest in a limited amount of investment grade hybrid securities, non-investment grade securities, unrated securities and, where appropriate, derivatives.

Investment Process

Pendal's Income & Fixed Interest team uses a disciplined and transparent process. The team's research effort focuses on identifying and capturing what we consider mispricings in credit market securities and utilises both qualitative assessment of companies and quantitative modelling which aim to identify opportunities and avoid problematic issuers. In addition to Pendal's internal research resources, Pendal sources research from an independent research company, CreditSights, focused on global companies.

Currency Management

The Fund may have assets denominated in foreign currencies. This means that changes in the value of the Australian dollar relative to foreign currencies may affect the value of the assets of the Fund. Currency markets can be extremely volatile and are subject to a range of unpredictable forces.

The Fund's foreign currency exposure may be hedged from time to time, in whole or part.

Portfolio Statistics (as at 29 February 2024)

Yield to Maturity [#]	4.96%
Running Yield [*]	4.30%
Modified duration	3.04 years
Credit spread duration	2.90 years
Weighted Average Maturity	3.26 years

[#] The portfolio yield to maturity is an estimate of the fund's internal rate of return. It is calculated as the yield to maturity of all securities comprised in the benchmark at the relevant time (sourced from Bloomberg), plus our estimate of the weighted average traded margin over the swap rate for each of those securities based on observed market prices. The portfolio yield to maturity does not represent the actual return of the fund over any period.

^{*} The portfolio running yield is calculated as the weighted average coupon rate of the physical portfolio assuming all securities are held at par or face value. Carry/interest income from synthetic positions are excluded from this calculation. Running yield does not reflect the actual income return of the portfolio.

Risks

An investment in the Fund involves risk, including:

- **Market risk** - The risk associated with factors that can influence the direction and volatility of an overall market, as opposed to security-specific risks. These factors can affect one country or a number of countries.
- **Security specific risk** - The risk associated with an individual asset.
- **Interest rate risk** - The risk associated with adverse changes in asset prices as a result of interest rate movements.
- **Credit risk** - The risk of an issuing entity defaulting on its obligation to pay interest/principal when due.
- **Liquidity risk** - The risk that an asset may not be converted to cash in a timely manner.
- **Valuation risk** - The risk that the value of an investment in a less active or liquid market is lower than what is reflected in the Fund's unit price.
- **Derivative risk** - The risk arising from use of derivatives to manage exposures to investment markets.
- **Counterparty risk** - The risk of another party to a transaction failing to meet its obligations.

Please read the Fund's Product Disclosure Statement (**PDS**) for a detailed explanation of each of these risks.

Fund performance and activity

The Fund outperformed the Bloomberg AusBond Non-Government Bond Index over the month.

Financials, utilities and supra-nationals sector positioning added to performance whilst financials detracted.

Activity during the month included adding exposure to telcos and real estate funded out of cash.

Outlook

We are positive on credit spreads given the continued fall in US core inflation and the resilience of the consumer. This easing of inflation concerns will see central banks cut policy rates which will likely see a soft economic landing as opposed to a hard landing and in turn would be positive for risk assets.

The data on credit lending globally shows that the tightening of lending standards is easing which is a great sign for corporates, economic growth and markets.

We are still keeping a watchful eye on global labour market and services inflation given this will be a driver of Central Bank policy.

Higher oil prices, a slowing China and geopolitical concerns remain a risk for markets.

Market review

February was a positive month for credit spreads as US company earnings provided a positive back drop, as did the supportive US economic data.

4th quarter US company reporting was a tailwind for markets. By the end of February, 98% of companies had reported with 76% beating earnings expectations by 7% on average. Sales grew 4% whilst earnings growth was 8% compared to the prior corresponding period.

US economic data continues to show a resilient economy with payrolls, jobless claims and manufacturing all printing better than expected during the month. We saw a further easing of bank lending standards in the US which is also a bullish sign for markets as this eases the ability of companies to access their bank funding requirements.

Credit spreads narrowed over the month. The Australian iTraxx index (series 40) traded in a 9bp range finishing 4bp tighter to close at 64bps. Australian physical credit spreads tightened 3bps on average. The best performing sectors were infrastructure and domestic banks that both narrowed 5bps, whilst the worst performing sector was industrials that only tightened 1bp. Semi-government bonds underperformed widening 2bps to commonwealth government bonds.
